WINNING COMPETITIVE DESIGN

MESSRS. HEWITT & BOTTOMLEY, ARCHITECTS

The desire of the architects to achieve a symmetrical facade, in keeping with the Georgian style imposed by neighboring buildings, was logical even on a sloping street front. It happened that on the side of the lot toward the lower street level there was a solid rock formation, which would have added greatly to expense in excavation had the floor levels been dropped on that side and the terrace been removed. All class rooms and the study hall are lighted from windows at ceiling height, with the light falling over left shoulders of the pupils. The average proportion of window opening to the floor area is thirty-four per cent., and to the opposite wall of the room, fifty-three per cent.
